

Maximize patient safety. Minimize infection risk.

Antimicrobial-Treated Gait Belt

- Resist the spread of germs

- Antimicrobial, wipeable & single-patient-use options

Infection Prevention Gait Belts

With concern about the spread of infection and cross-contamination, conventional gait belts can be challenging because they are difficult to clean and disinfect between patient use. Caregivers can help minimize concerns with infection-prevention options.

Available in three styles:

Antimicrobial-Treated Gait Belts are embedded with silver ion particles that inhibit the growth of bacteria, molds, yeasts, and other fungi.

Wipeable Vinyl Gait Belts have a smooth, sealed surface and can be safely wiped clean with a spray disinfectant between patients.

Single-Patient-Use Gait Belts are lower in cost, allowing them to be issued directly to the patient for the duration of their care. Disposable belt eliminates cross-contamination between patients.

To order, see reverse side.

Three options for maximizing infection prevention:

Antimicrobial-Treated

Embedded with silver ion particles, yet remains supple.

Wipeable Vinyl

Sealed surface leaves no hiding places for bacteria.

Single-Patient-Use

Issue one belt per patient to eliminate cross-contamination risk.

Infection Prevention Gait Belts
