

## Effective pressure relief for the heel or forefoot

### Open Heel Orthosis

### Open Forefoot Orthosis

- Transfers weight to the heel or forefoot, helping relieve pressure
- Allows for limited ambulation
- Soft inner liner for greater comfort and nonslip outsole for added stability

**Open Heel and Forefoot Orthoses** are affordable alternatives to more expensive wound care devices such as walker boots, helping transfer weight off the heel or forefoot to relieve pressure after surgery, trauma, or when wounds are present. Each orthosis allows for limited ambulation and features a soft, seamless inner lining that reduces irritation for greater patient comfort. Fits left or right.

**Open Heel Orthosis** features a single bridge strap for easy application and a midsole cushion for added comfort. Nonslip rubber outsole provides increased stability.

**Open Forefoot Orthosis** includes three center straps for optimal fit and stability and a removable toe guard for protection against unwanted toe contact. Lightweight, nonslip EVA outsole provides increased stability.

## Early screening for the diabetic foot

**Disposable Monofilaments** provide superior testing consistency and accuracy for early detection of sensory loss or neuropathy in diabetic patients. Proprietary filament is resistant to environmental fluctuations unlike nylon filaments, which can be affected by humidity or temperature changes that can compromise results. Monofilament is attached to a paperboard handle with a 5 site testing protocol map on the back. Perforated blister pack for protective storage. 20/pk.

#32745
